CURRICULUM VITAE				
Name	MD SHAHEER ALAM			
Date of Birth	06.07.1985			
Nationality	Indian			
Passport / Civil ID No.	Y5562207			
Position	Assistant Manager (Civil)			
Educational Qualification	- B.Tech (Civil Engineering) MDU University 2015 - Diploma in computer science Engineering from Board of Technical Education Banglore in 2007			
HSE Certification	- Knowledge of International Standards & Codes - Knowledge of Quality Management System			
Overall Yrs. of Experience	13.7 Years			
Work Experience				
Position	Organization		Period from (date) – to (date)	Years of Experience
<u>Assistant Manager</u>	<u>Torrent Gas Pvt Ltd</u>		22 nd of June-2020	Up to Till Date
<u>Site quality inspection Engineer</u>	<u>TUV India Ltd</u>		<u>June 2019 up to Sep-2019</u>	04 Month
<u>QA/QC Engineer</u>	<u>Bahl Builders Pvt Ltd</u>		<u>August-2018 To May2019</u>	10 Month
Engineer	AL-Manzil-Al-Massi Co Ltd.		June-2017 To March-2018	10 Month
Assistant Quality Engineer	Tech-craft		July-2007 To June-2012	5 Year
Sr. Engineer	Tech-craft		July-2015 To Feb-2017	1.7 Year

PROFESSIONAL EXPERIENCE

From	To	Company/Project/ Position/ Relevant Technical & Management Experience
June-2020	Till Date	Employer: Torrent Gas Pvt. Ltd Project: Steel Gas Pipeline with 3 City Gas Station Location: Hyderabad Position: Assistant Manager (Civil Project) <u>Management Key Responsibility</u> I oversaw the planning, execution, and delivery of multiple construction projects, ensuring adherence to project plans, budgets, and quality standards. Key responsibilities included: • Managing project teams, including subcontractors and vendors • Developing and implementing project plans and schedules • Monitoring project progress, identifying potential risks and implementing mitigation strategies • Evaluating project performance and identifying areas for improvement Identifying Risks • Conduct risk assessments during project planning • Analyse potential risks using probability and impact matrices • Monitor project progress and identify emerging risks Developing Mitigation Strategies • Develop contingency plans for high-risk areas • Implement risk management strategies such as risk avoidance, risk transfer, and risk reduction • Allocate resources and monitor progress of mitigation measures Ensuring quality while maintaining deadlines and budgets involves a multi-pronged approach • Quality Control: Establish clear quality standards and inspection criteria • Quality Assurance: Conduct regular inspections, tests, and audits • Material Management: Source high-quality materials and implement proper storage and handling procedures • Workforce Training: Train workers on proper construction techniques and safety protocols • Process Improvement: Identify areas for process optimization and implement improvements to streamline construction activities Manage a team of construction professionals and subcontractors • Communication: Establish clear communication channels and maintain regular communication with team members • Delegation: Delegate responsibilities based on team members' skills and experience • Motivation: Foster a positive work environment and recognize team contributions • Conflict Resolution: Address conflicts promptly and work towards mutually acceptable solutions • Collaboration: Encourage collaboration among team members and with subcontractors to achieve project goals Cost control and budget management in construction projects My approach to cost control includes

		• Planning and Estimation: Develop detailed project plans and cost estimates based on industry benchmarks and historical data • Procurement: Conduct competitive bidding and negotiate favourable terms with vendors and contractors • Tracking and Monitoring: Implement robust project accounting systems to track costs and identify potential overruns • Cost Reduction Strategies: Explore value engineering options, optimize material usage, and implement lean construction principles • Budget Control: Regularly review project progress against the budget and take corrective actions as needed Ensure compliance with safety regulations and industry best practices on construction sites • Safety Planning: Develop comprehensive safety plans and conduct risk assessments • Training and Education: Provide safety training to all workers and subcontractors • Hazard Identification and Control: Implement proactive measures to identify and eliminate potential hazards • Regular Inspections: Conduct regular safety inspections to ensure compliance with regulations • Incident Management: Establish clear procedures for reporting and investigating incidents Manage multiple construction projects simultaneously To effectively prioritize and manage multiple projects • Project Planning: Develop detailed project plans and schedules • Resource Allocation: Allocate resources effectively to meet the demands of each project • Communication: Maintain open communication with project stakeholders to align priorities • Risk Management: Identify and mitigate potential risks across projects • Project Monitoring: Regularly review project progress and make adjustments as needed <u>Accomplishment</u> • Challenge managed a complex construction project involving multiple subcontractors and stakeholders. Action implemented a comprehensive communication and coordination plan, ensuring seamless collaboration and timely project completion. The result delivered the project on schedule and within budget. • Challenge encountered unexpected soil conditions during excavation. Action conducted through soil testing and analysis, identifying alternative solutions to mitigate risk. Results resolve site issues without project delay. • Challenges are needed to reduce construction costs while maintaining quality standards. Action negotiated favorable contracts with vendors, optimize materials usage. • Challenge faced delays due to inclement weather. Action implemented proactive weather monitoring and contingency plans, minimizing project disruptions and maintaining construction timeline. Result completed the project within the revised schedule. • Challenge required to enhance site safety measures. Action developed and implemented a comprehensive safety program, including training, inspection, and risk mitigation strategies. <u>Technical Responsibility:</u>
--	--	--

		• Carried out the invoice and measurement sheet of all executed work at site such as RCC work shuttering work plastering work painting work waterproofing work etc from our team and checked it properly. • Collect all the checklist of executed work from TPI and check it with a measurement sheet submitted by contractors. • Quantity surveying and estimation of structural members and construction materials. • check the SRR and check the last executed quantity and update It with current measurement sheet. • Checking contractors' invoices and technical documents as per our company norms such as BG, labour license, workers insurance policy, tender documents. • Check all the NCR closing reports before uploading the bills on the company billing portal. • Reviewing the contractor scope, material estimate and pricing take-off to optimize competitive bidding processes. • Evaluated financing and construction activity. • Co-ordinate construction planning, material resources and staff schedule to complete project on time and under budget completion. • Decreased process discrepancies, proactively inspecting performance and site safety while monitoring project status. • Monitored daily construction and evaluated project process, contract completion and safety. • Conducting quality audits • Organize, implement, conduct, and manage the QA/QC Programs as per the Company's Quality Policy. • Supervising execution of civil structures like Rest Room building, central control room, closed shed building, Equipment's Foundation, Dispenser Foundation, and inside rigid and flexible pavements in coordination with Technical Service • Overseeing construction activities from its inception till finalization of job including site supervision. • Design reviews, co-ordination, site supervision and attending progress meetings for CGS construction with the Contractors and PMC Worley Parson. • Preparation of bill of quantities, tender documents, scope of works, technical specifications, technical drawings, basic engineering detailing for routine maintenance of CGS as well as new requirement / construction. • Preparation of Purchase Requisitions (PRs) for new tenders, materials, equipment and follow up with buyers to get the material in time. • Technical evaluation for Submittals / Tender Documents / Bids received, developing Technical Evaluation Criteria(s) and obtaining Pre & Post Bid Clarifications from the vendors / suppliers as per requirements. • Attending daily Department Meeting, Technical assistance, and close co-ordination with other disciplines like Mechanical, Electrical & Instrumentation Departments to streamline routine maintenance activities. • Preparation of Budget for both CAPEX and OPEX, five years plan and monitoring the budget throughout the year for optimum utilization. • Overall civil maintenance of existing plants with an operating capacity of three number of 2000SCMH compressor foundation Two number of 4500WL cascade foundation, one number of 2000SCMH DRS foundation, one number of 1000Ltr Odorize foundation and preparing annual civil maintenance blanket contract. This contract will reduce the overall maintenance cost in a professional manner being operated with the minimum manpower.
--	--	--

		Weekly visit the batching plant to cross-check the material quality and conduct various types of test on materials to confirm the quality of materials and check all the calibration report of machinery which is involve with our projects.
